ILLINOIS COMMERCE COMMISSION
CHIEF CLERK'S OFFICE

The accompanying tariff sheets listed on the attachment are issued by Ameritech Illinois and transmitted to you for filing.

Pursuant to the Commission's Orders on Rehearing in Docket 00-0393, Ameritech Illinois introduces a new offering, Broadband UNE.

This service is classified as a noncompetitive telecommunications service pursuant to the applicable provisions of the Public Utilities Act.

Notice will be published in newspapers of general circulation and copies of the filing are available for public inspection in the Company's public offices in accordance with 83 Illinois Administrative Code.

We respectfully request the Commission to accept these sheets to become effective May 14, 2002.

Any questions and correspondence regarding this filing should be directed to Pat Fleck, Director, Regulatory Affairs, who may be reached at:

Ameritech Illinois
225 West Randolph Street, 27C
Chicago, Illinois 60606
Tel. No.: 312-551-9186
FAX No.: 312-727-4771

Please acknowledge receipt by returning the extra copy of this letter.

Sincerely,

Pat Fleck (LB)

(Signed)
Manager - Tariff Administration

PART 24 SECTION 1

PART 24 - Other Wholesale Services
SECTION 1 - Broadband Service

Original Sheet No. 1

1. BROADBAND UNE

(N)

GENERAL

This Section applies to the Broadband UNE otherwise referred to in this tariff as "Broadband UNE", as provided by Ameritech Illinois, hereafter referred to as the "Company". Due to the nature of the technology being deployed with Project Pronto, Broadband UNE is only available consistent with the Illinois Commerce Commission (ICC) orders in Docket 00-0393. Broadband UNE is a non-competitive offering, which is offered in exchanges in Illinois as defined in Part 4, Section 1 of this Tariff.

The Company has filed this tariff pursuant to orders of the Illinois Commerce Commission and specifically reserves all rights and remedies it may have relating to possible challenges to those orders and this tariff under state and federal law, including federal preemption law.

General Regulations as found in Part 2 of this Tariff apply to this Section unless otherwise specified in this Section. The term "customer", which appears in Part 2 of the General Regulations, is the equivalent of the term "telecommunications carrier" as used in this Section.

This Tariff sets forth the terms and conditions for providing a Digital Subscriber Line ("DSL") service over Next Generation Digital Loop Carrier ("NGDLC") deployed in conjunction with the Company Project Pronto deployment consistent with the Illinois Commerce Commission (ICC) order on rehearing in Docket 00-0393. ~~Unbundled~~

This Tariff is not intended to address other unbundled network elements ("UNEs") that may otherwise be available in the Company outside loop plant network. Telecommunications carrier may obtain UNEs that otherwise are available as required by law (e.g. copper subloops and/or dark fiber) under the terms and conditions provided in the interconnection agreement or tariff as applicable.

SECTION 1 - Broadband Service

Original Sheet No. 2

1. BROADBAND UNE (cont'd)

(N)

GENERAL (cont'd)

§1.3 Where the Company has deployed remote terminals with NGDLC, the Company must provide the telecommunications carrier with access to the transmission facility from the customers' premises to the central office.

§1.4 Access to the Broadband UNE is provided under this tariff where NGDLC is deployed, operational, and facilities are available. Deployment of NGDLC will be at the sole discretion of the Company. The Company will provide telecommunications carriers information regarding the deployment of this technology through the DSL Network Information Page available via CLEC- Online.

§1.5 Any xDSL offering established under the terms of this Tariff must be technically feasible given the Company NGDLC deployed in a specific RT site. Additionally, any service provisioned over the network architecture described herein is subject to the technical specifications outlined in the Company "Broadband UNE Technical Publication" located in the CLEC Handbook.

§1.6 At this time, the only form of xDSL offering available with the architecture implemented by the Company is ADSL. The application of additional forms of xDSL and other ATM Quality of Service ("QoS") offerings to this architecture consistent with the Commission order in 00-0393 is discussed in Paragraph C.4. of this Section.

With respect to the Broadband UNE, all line cards deployed in conjunction with the Project Pronto network architecture will be owned and maintained by the Company.

PART 24 SECTION 1

PART 24 - Other Wholesale Services
SECTION 1 - Broadband Service

Original Sheet No. 3

1. BROADBAND UNE (cont'd)

(N)

A. DESCRIPTION

See §3.1
The Project Pronto infrastructure deployed by the Company currently consists of the following network architecture: an RT site equipped with NGDLC; RT derived copper DSL capable 2-wire loops extending from the RT site to the customer premises; dedicated fiber strands from the NGDLC RT to the central office with individual strands specific to voice and data respectively; NGDLC deployed in the Central Office Terminal ("COT") for the transport of the voice traffic from the RT site to the Company voice switch and/or Main Distribution Frame ("MDF"); and ATM capacity that will act as an OCD for the purpose of routing packet signals from the dedicated data fiber strand to a telecommunications carrier leased port on the OCD. Nothing in this section precludes either party from seeking additional functionalities as set forth in Paragraph C.6. of this Section.

§3.2
NGDLC will be installed in RT sites to effectively shorten the copper facility, as measured from the RT location, to less than 12 Kilofeet ("Kft") in most instances. The feeder cable is currently spliced to the backplane of the NGDLC placed in the RT site. A 2-wire copper cross-connect will be made in the SAI to migrate an existing distribution copper facility (associated with a subscriber address) from its existing copper feeder facility to the NGDLC. This cross-connect will serve to move the end-users line from the existing copper based network topology onto the fiber/copper network architecture, effectively shortening the length of the copper facilities (feeder and distribution) from the RT site to the end user premises.

SECTION 1 - Broadband Service

Original Sheet No. 4

1. BROADBAND UNE (cont'd)

(N)

A. DESCRIPTION (cont'd)

Missing sentence ① from § 3.3

A combination voice and data card or data card will be placed in the NGDLC equipment in the RT site. At this time the only card being deployed by the company for xDSL offerings over the ATM network is an ADSL line card. The procedure for introducing new xDSL line cards consistent with the Commission order in Docket 00-0393 is discussed in Paragraph C.6. of this Section. This card contains the electronics that generate and receive data transmissions carried from the end-user to the central office via a remote terminal. The card also performs multiplexing and splitter functions that the system cannot otherwise provide. A PVC will be established to route the data signal from the NGDLC to the OC-3c ATM data transport facility to the central office and subsequently to the telecommunications carrier leased OCD port.

§ 3.3 →

From the RT site, OC-3c level transport will be utilized to transport voice and data from the RT site to the Central Office on a non-protected fiber. An Asynchronous Transfer Mode ("ATM") based OC-3c will be provided for the data portion, and a Time Division Multiplexed ("TDM") based OC-3 level transport facility will be provided for the voice path. In the central office, the incoming data OC-3c terminates on the FDF and will be delivered to the OCD. The OCD aggregates OC-3cs from multiple RTs and routes the traffic to the appropriate telecommunications carrier outbound OC-3c or DS3c port leased on the OCD. The voice OC-3 also terminates on the FDF and will be delivered to the COT. From the COT the voice path is extended either via a GR-303, TR-008 or TR-057 interface to the Company voice switch; or at a DS0 speed to the MDF.

1. BROADBAND ONE (cont'd)

(N)

B. DEFINITIONS

Digital Loop Electronics ("DLE")

Specific outside plant loop network infrastructure described in detail above. Such term, for purposes of this tariff, will be utilized interchangeably with the term NGDLC.

§ 2.1

Digital Subscriber Line ("DSL")

Describes various technologies and services that expands the amount of data that can be transferred over a traditional copper phone line, allowing for high-speed internet and data access. The "x" in "xDSL" is a place holder for the various types of DSL services, including, but not limited to ADSL (Asymmetric Digital Subscriber Line).

§ 2.2

Asynchronous Transfer Mode ("ATM")

A packet-based technology that offers the efficiency of packet switching and the reliability of a circuit switched network.

Packet Switching

The function of routing individual data units, or "packets," based on address or other routing information contained in the packets.

Serving Area Interface ("SAI") or Feeder Distribution Interface ("FDI")

A cross-connect location outside of the RT with in which copper feeder facilities are cross-connected to the copper distribution facilities, branching out to the End-user location. The SAI/FDI might be located in the utility room in a multi-dwelling unit, in a remote terminal, or in a controlled environment vault (CEV).

§ 2.6

Asymmetrical Digital Subscriber Line ("ADSL")

A specific type of asymmetric DSL service that provides data and Internet connections that provide different speeds for upstream and downstream information.

1. BROADBAND UNE (cont'd)

(N)

B. DEFINITIONS (cont'd)

Sub-Loop

The physical copper loop from the RT site to the end user premises and that is technically feasible to access at terminals in the Company's outside plant. An accessible terminal is any point on the loop where technicians can access the wire or fiber within the cable without removing a splice case to reach the wire or fiber within. Such points may include, but are not limited to, the pole or pedestal, the network interface device, the minimum point of entry, the single point of interconnection, the main distribution frame, and the FDI/SAI.

Digital Loop Carrier ("DLC")

Network transmission equipment that digitally encode and aggregate, i.e. "multiplex," the traffic from subscriber's loops into DSL signals or higher for more efficient transmission or extended range beyond that traditionally permitted by copper loops. The analog signals are carried from the customer premises to a remote terminal (RT) where they are converted to digital signals, multiplexed with other signals, and carried, generally over fiber, to the Company central office.

Next Generation Digital Loop Carrier ("NGDLC")

A new form of DLC that consists of high-bandwidth fiber optic facilities from the COT to the RT that is used to receive and aggregate large amounts of bandwidth for the provisioning of DSL service.

Remote Terminal ("RT")

Either a Controlled Environmental Vault ("CEV"); Hut; and/or Cabinet equipped with Company NGDLC.

B. DEFINITIONS (cont'd)

Serving Wire Center ("SWC")

An end office equipped with an OCD with subbanding RT sites equipped with the Project Pronto NGDLC architecture.

Optical Concentration Device ("OCD")

A packet switch and router deployed in an end office for the purposes of routing and aggregation of incoming data traffic from an NGDLC equipped RT.

Permanent Virtual Circuit ("PVC")

A virtual circuit that provides the equivalent of a dedicated private line service over a packet switched network architecture.

Constant Bit Rate ("CBR")

An ATM Quality of Service ("QoS") set by the International Telecommunications Union-Telecommunications Services Sector ("ITU-T") that provides a transmission path through the packet switched portion of a network architecture at dedicated rates of speed (e.g. bandwidth).

Unspecified Bit Rate ("UBR")

An ATM QoS set by the ITU-T that provides a transmission path through the packet switched portion of the Project Pronto network architecture (the OC level data transport and the OCD) at unspecified rates of speed using only the available bandwidth.

Constant Bit Rate Permanent Virtual Circuit ("CBR PVC")

PVC providing a constant, dedicated allocation of bandwidth through the packet switched portion of the Project Pronto network architecture.

Unspecified Bit Rate/Constant Bit Rate ("UBR+CBR")

An arrangement offering one or more UBR PVC(s) and one more or CBR PVC(s) as technically feasible.

C. TERMS AND CONDITIONS

1. Network Configurations

- 34.2
- 1.1 The Company must provide telecommunications carrier access to the Broadband UNE from the demarcation point at the customer's premises to the termination (port) on the OCD in the central office, including the associated electronics at the RT and the central office.
- 1.2 Telecommunications carrier access to the Company Project Pronto architecture pursuant to this tariff will be offered in two network configurations: A Data configuration in which the telecommunications carrier is provided the capability to provision data connectivity from an end user location through the Project Pronto architecture; and a Combined Voice and Data configuration in which telecommunications carrier is provided the means to provision both voice and data over the Project Pronto network architecture.
- 1.3 One of the telecommunications carrier's means of access to the data portion of the Project Pronto architecture (as provisioned through the OCD), whether in the Data configuration or Combined Voice and Data configuration, is via collocation in the end office. If the telecommunications carrier decides to access the Broadband UNE, the telecommunications carrier is required to be collocated at each end office in which telecommunications carrier desires to access the Broadband UNE. Telecommunications carrier is responsible to ensure that any necessary collocation arrangement, whether virtual and/or physical, and any subsequent collocation augments are completed and in place in each serving wire center in which it desires to place an order for any of the network components described within this Tariff.

2. Data Configurations (cont'd)

2.2 Subloops

ILLINOIS COMMERCE COMMISSION
CHIEF CLERK'S OFFICE

The Company is offering two (2) Subloop options in order to provide telecommunications carriers the capability of provisioning data connectivity from the customer premises to the NGDLC deployed in the RT site over existing distribution copper facilities:

- 2.2.1 HFPSSL - In the case in which a telecommunications carrier desires to transport its customers' data with the Company transporting the customers' voice over the same copper facility from the RT to the end user, telecommunications carrier will order the High Frequency Portion of the Subloop ("HFPSSL") option. The HFPSSL is equivalent to the high frequency portion of the existing copper facility from the RT site to the end user premises and is shared with the Company existing voice service.

The HFPSSL arrangement outlined above is only available in such instance that the Company is the billing provider of the voice service to the end-user.

- 2.2.2 Data Only Subloop - In the case in which the telecommunications carrier desires to provide an xDSL service utilizing the full copper facility from the RT site to the end user premises (non-line shared), telecommunications carrier will order a Data Only Subloop. This Subloop is the full physical copper facility from the SAI site to the NID at the customer premise and constitutes a separate copper facility to the existing copper facility used to provide voice service.

The existing loop qualification rates and process available in conjunction with unbundled DSL capable loops, modified to include NGDLC specific information, will be made available to telecommunications carriers upon request in order to determine which locations can be served via this arrangement.

2.3 Permanent Virtual Circuit ("PVC")

- 2.3.1 ADSL PVC - In addition to the Subloop components outlined above, telecommunications carrier will order a PVC from the RT to the telecommunications carrier leased OCD Port.

The PVC network component, which will include the use of the ADSL line card, common control and necessary software supporting NGDLC, will consist of a permanent virtual circuit to transmit the data signal from the NGDLC equipped RT over the OC-3c facility extended to the OCD in the central office and subsequently aggregate traffic through the OCD to the telecommunications carrier OCD Port Termination. This network component will be required in addition to the HFPSL, Data Only Subloop, or Combined Voice and Data Loop and the OCD Port Termination.

Initially, the Company is only offering an ADSL Class of Service PVC. The potential deployment of additional PVC Classes of Service are outlined in detail in Paragraph C.6. of this Section.

PVCs are made available by the Company at the ATM Qualities of Service outlined below in Paragraph C.4. of this Section. The Company is offering three basic PVCs as of this time: CBR, UBR and CBR+UBR.

2.4 OCD Port Termination

In addition to the Subloop and PVC components outlined above, telecommunications carrier will order an OCD Port Termination. The OCD will aggregate incoming PVCs from multiple RT locations and route telecommunications carrier traffic to the telecommunications carrier leased port on the Company OCD.

The Company is offering two forms of OCD Port Termination: OC-3c and DS3. Specific terms and conditions for the use of the various OCD Ports is outlined in Paragraph C.5. of this Section.

2.5 Cross-Connects

The following additional cross-connects may be applicable:

- 2.5.1 Serving Area Interface ("SAI") Cross-Connect - The SAI Cross-Connect will be required in the field to connect the feeder copper cable pair from the NGDLC equipped RT site to the distribution cable pair serving the individual customer premises. If the end user has already been converted to the NGDLC architecture for the provision of voice services this cross-connect will continue to be required to convert the customer from the voice portion of the NGDLC system to an xDSL capable line card. If the end user has already been converted to the NGDLC architecture for the provision of xDSL service this cross-connect will not be required.
- 2.5.2 OCD Cross-Connect to Collocation - An OCD cross-connect may be purchased by telecommunications carrier to extend the OCD Port Termination to either a virtual or physical collocation arrangement. This cross-connect will be provided for at like speed to telecommunications carrier's chosen OCD Port: OC-3c or DS3.

3. Combined Voice and Data Configuration

§6.1 The Combined Voice and Data Configuration provides a means by which a telecommunications carrier may provide both the voice and data service to an end user over the Project Pronto architecture. The Company will not offer the capability for a telecommunications carrier and a third party to share the voice and data portion of the loop.

§6.2 This network configuration will utilize an underlying voice path provisioned over NGDLC delivered to the MDF. Use of this network component in addition to the PVC and OCD Port Termination network components will provide telecommunications carriers a combined voice and data solution. Such network configuration provides telecommunications carrier the capability to provision both voice and data services via a single copper facility from the remote terminal to the customer premises.

§6.3 Telecommunications carrier will be provided the capability to access the data traffic in a like manner as that outlined above for the data configuration: via a leased port on the OCD and cross-connected to the Telecommunications carrier's collocation cage.

C. TERMS AND CONDITIONS (cont'd)

3. Combined Voice And Data Configuration (cont'd)

§ 6.5 Due to the nature of the Project Pronto infrastructure voice and data traffic from a common copper facility will be split into two distinct paths in the NGDLC equipped RT as addressed above. The Company will provide telecommunications carrier with two distinct hand-off points at their selected virtual or physical collocation arrangement in the central office for voice and data traffic respectively. The combined voice and data arrangement will be provided to one (1) telecommunications carrier's collocation arrangement. The Company will not provide the voice path to one (1) telecommunications carrier and the data path to a third party collocation arrangement or vice versa.

3.1 Combined Voice & Data Network Components

§ 6.6.2 3.1.1 Combined Voice and Data Loop - Telecommunications carrier will establish an underlying 2-wire copper facility from the RT site to the end user location. Both voice and data will be provisioned over such copper facility. This arrangement will consist of the voice path from the NGDLC equipped RT site to the MDF in the central office. From the MDF this facility will be extended to a telecommunications carrier's collocation arrangement in a manner similar to existing unbundled local loops provided over UDLC.

In addition to the Combined Voice and Data sub-loop, telecommunications carrier must have in place the ADSL FVC, OCD Port Termination, SAI Cross-Connect and OCD Cross-Connect to collocation as outlined above in paragraph C.2.

ILLINOIS COMMERCE COMMISSION
CHIEF CLERK'S OFFICE

4. ATM Qualities of Service ("QoS")

Initially, the Company is offering two forms of ATM QoS options in conjunction with the PVC components outlined in this tariff: 1) UBR and 2) CBR.

4.1 UBR

The Company is offering telecommunications carrier an Unspecified Bit Rate ("UBR") QoS PVC for the establishment of telecommunications carrier ADSL service.

The UBR PVC will provide telecommunications carriers an allocation of the "available" (non-dedicated) bandwidth at the time an individual end user accesses the Project Pronto architecture.

Initially, telecommunications carrier is restricted to the provision of Discrete Multi-Tone ("DMT") service in conjunction with the UBR and CBR PVCs.

Initially, the maximum number of PVCs that can be provisioned over the Project Pronto architecture is dependant upon the form of OCP Port Termination purchased by telecommunications carrier. Additionally, upstream and downstream bandwidth specified by telecommunications carriers will further impact the volume of PVCs capable of being provisioned through the OCD. Telecommunications carrier will be responsible for ensuring that there is sufficient capacity on its leased OCD ports (DS3c or OC-3c) to support telecommunications carrier provided PVCs over this infrastructure.

In such instance as telecommunications carriers traffic exceeds thresholds for port capacity published in the Company's Broadband Technical Publication, Company reserves the right to exercise the appropriate remedy to maintain the integrity and availability of services over the Company's Project Pronto network. Potential remedies could include, but are not limited, to the discontinuation of service across the shared OC-3c facility and/or to require telecommunications carrier to purchase additional ports or capacity prior to accepting orders for additional PVC's.

PART 24 SECTION 1

PART 24 - Other Wholesale Services
SECTION 1 - Broadband Service

Original Sheet No. 16

1. BROADBAND ONE (cont'd)

(N)

C. TERMS AND CONDITIONS (cont'd)

4. ATM Qualities of Service ("QoS") (cont'd)

4.1 UBR (cont'd)

The Company shall provide telecommunications carriers with options for different amount of bandwidth. Some QoS classes are currently available and additional QoS classes will become available in the near future to allow telecommunications carrier the opportunity to provide distinctive offerings, if it so chooses. The Company is required to provide evidence that different QoS classes are not technically feasible. If a telecommunications carrier wishes to provide a certain service, it is up to the Company to show that the service is incompatible with the current architecture. This process is described in further detail in Paragraph C.6. of this Section.

§7.6.6
PVCs are configured in advance by ATM service providers between the telecommunications carrier and user customer and a single service provider. Under the terms of this Tariff, telecommunications carrier represents the single service provider. Telecommunications carrier is responsible for providing the information necessary for the Company to provision the PVC over the Company Project Pronto network architecture. This information will be provided by the telecommunications carrier to the Company pursuant to the CLEC Information Form (CLIF) process and the CLEC Profile Process as outlined in this Tariff and addressed in the CLEC Handbook.

The Company will be responsible for network monitoring of the use of the common OC-3c between the central office and the RT site. In the provisioning of a PVC, telecommunications carriers will be restricted to upstream and downstream bandwidth, aggregate power and noise settings which are technically compatible with the card vintage deployed in the NGDLC equipment. The Company must show to the Commission that the telecommunications carrier's requested PVC is not technically feasible.

Original Sheet No. 17

1. BROADBAND UNE (cont'd)

(N)

C. TERMS AND CONDITIONS (cont'd)

4. ATM Qualities of Service ("QoS") (cont'd)

4.2 CBR

The Company will make available and telecommunications carrier may order a Constant Bit Rate ("CBR") QoS PVC for the establishment of telecommunications carrier DSL service.

§7.7.2
The CBR PVC will provide telecommunications carriers a dedicated, fixed allocation bandwidth to the end user across the Project Pronto architecture. The standard CBR PVC offering will be 96 kbps. In some instances, telecommunications carriers may order CBR service as outlined in this tariff in excess of 96 kbps CBR to meet customer requirements. Telecommunications carriers are aware that the permanent pricing of the CBR PVC has not been completed and that the price of a CBR PVC tends to increase with the increase in bandwidth.

Initially, CBR bandwidth will be allocated on a first come first serve basis. The potential of offering higher bandwidth CBR services is outlined in Paragraph C.6. of this Section.

4. ATM Qualities of Service ("QoS") (cont'd)

4.2 CBR (cont'd)

Initially, in provisioning a CBR PVC, the Company will apply the following QoS parameters:

Upstream Cell Transfer Delay 3ms;
Downstream Cell Transfer Delay 2 ms;
Upstream Cell Delay Variance 1.2 ms;
Downstream Cell Delay Variance .7 ms;
Cell Loss Ratio 7x10

Initially, the Company will provide two CBR serving arrangements:

CBR PVC within which a CBR PVC will be offered in a like manner to the UBR PVC offering outlined above; and CBR+UBR within which a telecommunications carrier will be provided the use of both a CBR and a UBR PVC per end user.

SECTION 1 - Broadband Service

Original Sheet No. 20

1. BROADBAND UNE (cont'd)

(N)

C. TERMS AND CONDITIONS (cont'd)

5. OCD Port Termination (cont'd)

The maximum number of PVCs capable of being provisioned through an OCD Port varies on the level of service being provisioned through such port. The Company technical specifications define these limits at 1000 PVCs per DS3c port and 2000 PVCs per OC-3c Port. However, the telecommunications carrier is responsible to monitor services offered through a leased OCD port and as such the Company will not guarantee any specific number of PVCs being available through any leased OCD Port.

When DS1 functionality is made available, telecommunications carriers are required to either move off of the higher bandwidth facility or continue with the DS3 level and pay the appropriate charge. The timeframe for telecommunications carriers to transfer service is five business days from when the Company notifies the telecommunications carrier that DS1 functionality is available.

Telecommunications carrier's will be allotted one OCD Port Termination for live customer traffic and an optional second OCD Port Termination for redundancy. Additional OCD Ports will be provided only at such time as telecommunications carriers has reached a threshold utilizing 60% of available capacity on the existing port termination providing live customer traffic.

The Company will not guarantee the availability of a specific level of OCD Port Termination, DS3c or OC-3c, in any specific end office.

6. Availability of Future Features and Functionalities

- 6.1 In the filing of the initial version of this Tariff, only ADSL/UBR and ADSL CBR Quality of Service ("QoS") offerings are available in conjunction with Broadband UNE. The Special Request Process is limited to requests for functions or features that are commercially available at the time the telecommunications carrier request is made.
- 6.2 The Company shall collaborate with telecommunications carriers to ensure that additional features and functions that are technically and economically feasible are introduced.
- 6.3 Should a vendor of DSL-enabled NGDLC, deployed in conjunction with Project Pronto, develop for use with the Project Pronto NGDLC equipment, a feature or functionality (such as other versions of xDSL or additional ATM QoS offerings) desired by telecommunications carrier, or should telecommunications carrier desire a higher grade ATM QoS than is available at the time telecommunications carrier seeks such feature, function or ATM QoS, telecommunications carrier may submit a request for such feature, function or ATM QoS, which will be governed, except as where otherwise noted, by the Special Request Process outlined below.
- 6.4 This Special Request process shall not apply to features and functions that are intended to become standard offerings to all telecommunications carrier. The time intervals for the Approval for Use ("AFU") process shall be the same for both features/functions requested through the Special Request process and for features/functions intended to become standard offerings.

7. Generic Special Request

ILLINOIS COMMERCE COMMISSION
CHIEF CLERK'S OFFICE

- 7.1 Should telecommunications carrier desire a specific feature or function not presently offered in the Company tariff and/or as expressly outlined below, telecommunications carrier will follow the Special Request Process outlined herein.
- 7.2 If requested by telecommunications carrier, the Company will hold a review meeting prior to the actual submission of the Special Request to discuss the specific arrangement with telecommunications carrier in an attempt to determine technical feasibility. Such meeting will be held within five (5) business days of telecommunications carrier's request.
- 7.3 Telecommunications carrier will submit in writing to the Company the Special Request Process Application, with appropriate operational narrative, drawings, technical references, location(s) for deployment, requested implementation date(s), and a forecasted quantity over a twelve (12)-month period. A \$100 fee will accompany the Special Request application. This Application is available in the CLEC Handbook.
- 7.4 The Company will acknowledge receipt of the Special Request Process Application within one (1) business day of telecommunications carrier's request ("Request Date" or "RD") via e-mail. Additionally, the Company will acknowledge receipt through U.S. Mail within five (5) business days.
- 7.5 The Company shall inform telecommunications carrier within ten (10) business days if it believes that the request is not technically and/or economically feasible. If the Company believes that further development is not technically and/or economically feasible, Company will provide telecommunications carrier a written explanation for the basis of its belief. In addition, the Company shall inform telecommunications carrier if the requested feature or function is already subject to an AFU process. If the requested feature or function is already subject to the AFU process, the Company shall provide telecommunications carrier with the date of completion for the AFU process. The allotted time to complete such process shall not exceed the intervals specified below.

C. TERMS AND CONDITIONS

7. Generic Special Request (cont'd)

7.6 The Company shall provide telecommunications carrier with a detailed price quote no later than forty-five (45) business days (RD+45) following Telecommunications carrier submission of the Special Request Process Application. If the requested feature or function has been subject to the AFU process already, or an AFU process is not necessary, Company shall provide telecommunications carrier with a detailed price quote no later than twenty (20) business days (RD+20) following Telecommunications carrier submission of the Special Request Process Application. The price quote will specify all individual cost elements that will be recovered by the quoted price. The Company shall make the relevant subject matter experts available for possible clarification requests by telecommunications carrier. The Company shall testify that all identified costs are calculated using TELRIC principles.

7.7 Telecommunications carrier will notify Company by written authorization whether to proceed with development within ten (10) business days (RD+55) from receiving the Company price quote.

7.8 If telecommunications carrier requests to proceed with development, prospective product delivery dates will be as outlined below, contingent upon whether or not an Approval for Use regarding the new feature/function has been completed and/or is required to be completed in introducing the new feature/function.

7.9 Telecommunications carrier will be responsible for the incremental costs incurred by the Company solely attributable to telecommunications carrier's request. All such costs will be developed based on the TELRIC methodology.

C. TERMS AND CONDITIONS (cont'd)

7. Generic Special Request (cont'd)

7.10 The requesting Telecommunications carrier and the Company will negotiate the manner in which Telecommunications carrier pays for any TELRIC-compliant development costs. If such negotiations do not reach a mutually satisfactory conclusion within thirty (30) calendar days, either party may notify the Commission. Upon such notification, the Commission may open an expedited tariff investigation to determine the appropriate rate levels for the element(s) in dispute.

7.11 The Company will be reimbursed for the development costs by the telecommunications carrier submitting the initial request for a specific product offering. For any subsequent requests, by a different telecommunications carrier, for the same feature/function of a product, for which the Company has already charged the initial telecommunications carrier for development costs, the Company shall charge the telecommunications carrier an equitable portion of the development costs. The Company shall subsequently credit the initial telecommunications carrier the amount which it has received from the subsequent telecommunications carrier. This process shall continue as long as additional telecommunications carrier's request the same feature/function, so that all carriers share in the development cost equally. The Company shall report each credit, and the method used to develop the credit, to the Director of the Telecommunications Division of the Illinois Commerce Commission within 30 days of its issuance.

7.12 Any products requested and/or provided for under the provisions of the tariff governing future features and functionalities will be subject to a determination of whether facilities exist and are capable of providing the desired feature and/or functionality requested by telecommunications carrier.

7.13 Should telecommunications carrier cancel the request after informing the Company that it wishes to proceed with development, cancellation charges will be applied, not to exceed the costs incurred by the Company, up to and including the point of cancellation.

8. Product Deliver Timeframe

- 8.1 Should telecommunications carrier request a feature and/or function that has already been Approved for Use ("Post-AFU") with Company's Project Pronto network architecture, the Company will make available to telecommunications carrier, the requested product offering no later than 30 business days after telecommunications carrier's confirmation of its acceptance of Company's terms to move forward with the request (RD+85).
- 8.2 Features and functions made available in this initial 30-business-day time period may require further ongoing enhancements, and may be limited to non-mechanized service order flows until necessary system enhancements can be arranged, and the product introduced via the change management process.
- 8.3 Should telecommunications carrier request a feature and/or function that has not been Approved for Use (Pre-AFU) with the Company's Project Pronto network architecture, the Company will make the requested product offering available to telecommunications carrier within 30 business days of the completion of the AFU process for the proposed feature/function.
- 8.4 An AFU will only be necessary for the first requesting carrier for a specific product. If the same telecommunications carrier, or different telecommunications carrier, submits a subsequent request for a specific product offering, after completion of the AFU process and initial product development, the Company will make available such product offering at the telecommunications carrier's specified RT sites (provided such sites are DSL-enabled Project Pronto sites), within 30 business days of such request, as outlined above in the timeline for Post-AFU product offerings.

9. Approval For Use

ILLINOIS COMMERCE COMMISSION

- 9.1 Approval for Use is the process used by the Company to approve all new infrastructure and network enhancements (including generic software releases) to be deployed in Company's network. This process generally is triggered by new product offerings that create the need to deploy additional network infrastructure, technology and/or releases.
- 9.2 The Approval for Use process involves five distinct steps: Initial Screen; Architectural and Economic Analysis; Development; First Office Application and Integrated Testing; and Deployment.
- 9.3 In such instance as a telecommunications carrier requests a new feature and/or function over the Company's Project Pronto network architecture that has not been Approved for Use prior to such request, the Company will conduct an Approval for Use evaluation of the new feature and/or function.
- 9.4 In the instance in which a telecommunications carrier is requesting a feature and/or function that must be governed by the full AFU process, as determined by the Company, the AFU will take no more than 75 business days to complete. In this instance, the requested product will be made available to the telecommunications carrier within 105 business days of the telecommunications carrier's confirmation to move forward with the request (75 business days to achieve the AFU plus the standard 30 business day interval outlined above for post-AFU product offerings).
- 9.5 In the instance in which a telecommunications carrier is requesting a feature and/or function that could be introduced using a streamlined AFU process, at the discretion of the Company, the Company will take no more than 45 business days for the completion of the AFU. In this instance, the requested product will be made available to telecommunications carrier within 75 business days of telecommunications carrier confirmation of its acceptance of Company's terms to move forward with the request (45 business days to achieve the AFU plus the standard 30 business day interval outlined above for post-AFU product offerings).

9. Approval For Use (cont'd)

9.6 In the instance in which a telecommunications carrier is requesting a feature and/or function that requires only a software upgrade, the Company will take no more than 20 business days for the completion of the AFU. In this instance, the requested product will be made available to telecommunications carrier within 50 business days of telecommunications carrier's confirmation of its acceptance of Company's terms to move forward with the request (20 business days to achieve the AFU plus the standard 30 business day interval outlined above for post-AFU product offerings).

10. G.Lite Specific

10.1 Upon receipt of a Special Request Process Application from a telecommunications carrier as outlined above for a G.Lite product offering, the Company will make available a G.Lite product offering to the requesting telecommunications carrier, at the locations specified by telecommunications carrier (provided such locations are DSL-enabled Project Pronto locations), within 50 business days of telecommunications carrier's confirmation to move forward with the request (20 business days to achieve the AFU, plus the standard 30 business day interval outlined above for post-AFU product offerings).

10.2 Alcatel's G.Lite offering is only available in conjunction with Alcatel Litespan Release 11.0 and the Alcatel quad card. Therefore, the Company will not accept a Special Request for a G.Lite functionality or introduce such functionality into the Approval for Use process until the Approval for Use process is complete for the Alcatel Litespan Release 11.0 quad card functionality.

10.3 The Alcatel Litespan Release 11.0 quad card is currently being tested in the AFU process. This process will be completed no later than the second quarter of 2002. Specific information as to when testing will be complete will be provided to telecommunications carrier's via Accessible Letters. When testing is complete, the Company will begin accepting Special Requests for the G.Lite functionality.

ILLINOIS COMMERCE COMMISSION
CHIEF CLERK'S OFFICE

10.4 As a precondition to development of such offering, telecommunications carrier must agree to provide the Company with a non-binding one-year forecast of demand for a G.Lite product offering.

10.5 Telecommunications carrier is responsible for the TELRIC costs its request places on the Company. The manner of cost recovery is outlined in Paragraph 7.0 above. Any requested and agreed upon G.Lite offering would be subject to existing facilities as outlined in Paragraph 7.0 above.

11. G.SHDSL Specific

11.1 Upon receipt of a Special Request Process Application from a telecommunications carrier, as outlined above, for a G.SHDSL product offering, the Company will make available a G.SHDSL product offering to the requesting telecommunications carrier, at the locations specified by the telecommunications carrier (provided such locations are DSL-enabled Project Pronto locations), in the timeframes established under the full AFU process outlined above.

11.2 Telecommunications carrier will make a G.SHDSL offering available to telecommunications carrier within 105 business days of its confirmation to move forward with the telecommunications carrier's request for a G.SHDSL offering, subject to the terms noted below.

11.3 The Company will not accept any Special Request for a G.SHDSL functionality, or introduce such functionality into the Approval for Use process, until the G.SHDSL offering is made available from Alcatel for Company testing. Specific information in regards to both of these events will be provided to telecommunications carriers via Accessible Letters.

11.4 As a precondition to development of such offering, the telecommunications carrier must agree to provide the Company with a non-binding one-year forecast of demand for a G.SHDSL offering.

11.5 Telecommunications carrier is responsible for the TELRIC costs its request places on the Company. The manner of such cost recovery is outlined in Paragraph 7.0 of this Section.

11.6 Facility availability will be determined by the factors outlined in Paragraph 7.0 of this Section above.

12. Reuse of Facilities

Each Party will abide by applicable federal and state laws and regulations in obtaining End User authorization prior to changing an End User's Local Exchange Carrier to itself and in assuming responsibility for any applicable charges as specified in the FCC's rules regarding Subscriber Carrier Selection Changes (47 CFR 64.1100 through 64.1170) and any applicable state regulation. Each Party shall deliver to the other Party a Representation of Authorization that applies to all orders submitted by a Party under this Tariff requiring a telecommunication carrier change. A Party's Representation of Authorization shall be delivered to the other Party prior to the first order submitted to the other Party. Each Party shall retain on file all applicable letters and other documentation of authorization relating to its End User's selection of such Party as its telecommunications carrier, which documentation shall be available for inspection by the other Party at its request during normal business hours.

The provisions for CPNI, end user authorization, and reuse of UNE facilities in the existing interconnection agreement or tariff as applicable will apply to this tariff section, subject to applicable federal and state laws and regulations.

Each Party shall cooperate with any investigation of a complaint alleging an unauthorized change in local exchange service at the request of the FCC or the Commission.

13. OCD Port Sharing

Telecommunications carrier can share an OCD Port leased by telecommunications carrier with third parties requesting shared use of the telecommunications carrier OCD Port Termination. Such arrangement shall be at the sole discretion of telecommunications carrier, without any involvement or facilitation by the Company. Telecommunications carriers shall agree upon one single point of contact. The single point of contact is responsible for all matters surrounding the lease of an OCD port. The Company will bill the single point of contact for the entire OCD port. It is telecommunications carriers' responsibility to bill each other in the case of OCD port sharing.

The Company will require a Letter of Authorization ("LOA") from the telecommunications carrier indicating their agreement to provide such service to any third party provider of xDSL service. Such LOA will be required from the telecommunications carrier at a minimum of seven (7) business days in advance of accepting any end user service order from a third party provider of the Broadband UNE end user arrangements.

14. Provisioning and Installation

The Company will not guarantee that the copper subloop arrangements provided in conjunction with this tariff will perform as desired by telecommunications carrier for xDSL-based or other advanced services, but will guarantee basic metallic loop parameters, including continuity and pair balance. Telecommunications carrier requested testing by the Company beyond these parameters will be billed on a time and materials basis at the applicable tariffed rates. On loops where telecommunications carriers have requested that no conditioning be performed, the Company's maintenance will be limited to verifying loop suitability based on POTS design. For loops having had partial or extensive conditioning performed at telecommunications carrier's request, the Company will verify continuity, the completion of all requested conditioning, and will repair at no charge to telecommunications carrier any gross defects which would be unacceptable based on current POTS design criteria and which do not result from the loop's modified design.

C. TERMS AND CONDITIONS (cont'd)

14. Provisioning and Installation (cont'd)

Telecommunications carrier shall designate, at the telecommunications carrier's sole discretion, what loop conditioning the Company is to perform in provisioning subloop orders. Conditioning may be ordered on any of the copper subloops outlined herein of any length. Rates for loop conditioning are the same as those set forth for standard xDSL contained in Pricing Appendix to the interconnection agreement or tariff as applicable.

Provisioning and installation of the network components and service configurations described in this tariff will be provided for in two separate service orders: telecommunications carrier infrastructure orders and telecommunications carrier End User specific orders.

14.1 Infrastructure Service Order

The Infrastructure Service order is required for the establishment of data connectivity from the OCD to the telecommunications carrier collocation arrangement and subsequent ATM network. This order consists of the OCD Port Termination and associated Cross-Connect to Collocation. These components will be provided for on one Access Service Request ("ASR").

Telecommunications carrier must complete the necessary network infrastructure to support its DSL service in the NGDLC environment two (2) business days prior to placing an end user specific order as defined below.

ILLINOIS COMMERCE COMMISSION
CHIEF CLERK'S OFFICE

14.1 Infrastructure Service Order (cont'd)

In conjunction with each ASR submitted, telecommunications carrier must also submit a CLEC Information Form ("CLIF") indicating virtual parameters that must be established in conjunction with the telecommunications carrier leased OCD Port Termination. These parameters include the following: Customer Address (Point of Presence ("POP") Location); Connection Speed (OC-3c or DS3c); Connection Type (UNI DCE or UNI DTE); Virtual Path Indicator ("VPI") and Virtual Channel Indicator ("VCI") Ranges; and Number of Connections. These parameters may change if additional features or functionalities are added pursuant to Paragraph C.6. of this Section.

§13.8.4

Specific VPI/VCI values provided on the CLIF must be consistent with published parameters outlined in the Company "Broadband Service UNE Technical Publication." This document outlines the compatible VPI/VCI ordering ranges with the Company equipment deployed in conjunction with this architecture.

14.2 End User Specific Order

The telecommunications carrier end user specific orders consist of the DLE-xDSL HFPSL; the DLE-Subloop; or the DLE Combined Voice and Data Loop. These elements plus the PVC element to establish data connectivity will provide the configurations outlined above, to end user location. These network components will be ordered on one Local Service Request ("LSR").

Prior to the issuance of an end user specific order telecommunications carrier must build the prospective CLEC Profile ("CLEC Profile") telecommunications carrier desires to offer in conjunction with the Broadband UNE outlined in this Tariff. Terms and conditions for the establishment of the CLEC Profile are outlined in Paragraph 16 of this Section.

If the telecommunications carrier is establishing the Combined Voice and Data arrangement outlined above, telecommunications carrier must complete the Dual Inventory Collocation process as referenced in the Broadband UNE Ordering Guidelines and/or CLEC Handbook section outlining ordering of this offering.

PART 24 - Other Wholesale Services
SECTION 1 - Broadband Service

Original Sheet No. 33

1. BROADBAND ONE (cont'd)

(N)

C. TERMS AND CONDITIONS (cont'd)

15. Provisioning Intervals

15.1 End User Specific Interval

The provisioning and installation interval for the end user component where no conditioning is requested on orders for 1-20 loops per order or per end-user location will be 3 business days for any service established consisting of the HFPSL arrangement and 5 business days for any service established consisting of the Data Only sub-loop or Combined Voice and Data loop, or will be equal to the provisioning and installation interval applicable to the Company tariffed xDSL-based services, or its affiliate's whichever is less.

The provisioning and installation intervals for the various end user components provided in this tariff where conditioning is requested, on orders for 1-20 loops per order or per end-user customer location, will be ten (10) business days, or the provisioning and installation interval applicable to the Company tariffed xDSL-based services or its affiliate's xDSL-based services where conditioning is required, whichever is less.

Orders for more than 20 loops per order or per end user location, where no conditioning is requested will have a provisioning and installation interval of 15 business days, or as agreed upon by the Parties.

In the event the end user customer should require conditioning during non-working hours, the due date may be adjusted consistent with end user release of the voice grade circuit and out-of-hours charges may apply.

Orders for more than 20 loops per order which require conditioning will have a provisioning and installation interval agreed by the parties in each instance.

PART 24 - Other Wholesale Services
SECTION 1 - Broadband Service

Original Sheet No. 34

1. BROADBAND UNE (cont'd)

(N)

C. TERMS AND CONDITIONS (cont'd)

15. Provisioning Intervals (cont'd)

Subsequent to the initial order for the end user components provided in this tariff, additional conditioning may be requested on such loop(s) at the rates and under the terms and conditions set forth in telecommunications carrier's Interconnection Agreement or tariff as applicable. Applicable service order charges will apply; provided, however, when requests to add or modify conditioning are received for a pending xDSL capable loop(s) order, no additional service order charges shall be assessed, but the due date may be adjusted if necessary to meet standard offered provisioning intervals. The provisioning interval for additional requests for conditioning pursuant to this subsection will be the same as set forth above. In addition, telecommunications carrier agrees that standard offered intervals do not constitute performance measurement commitments.

The OCD Port Termination and OCD Cross-Connect to collocation must be in place two (2) business days prior to telecommunications carrier's placing of any subloop (and PVC) service orders.

15.2 Infrastructure Specific Interval

The provisioning and installation intervals for DS3 OCD Port Terminations will be ten (10) business days from receipt of an accurate and valid ASR. Five (5) business days are required for facilities verification and five (5) business days are required for the provision of service.

The provisioning and installation intervals for OC-3c OCD Port Terminations will be negotiated by the parties and agreed upon on an individual case basis. Any disputes on the proper interval will be resolved pursuant to the dispute resolution provisions in the parties' existing interconnection agreements or the applicable tariff provisions.

C. TERMS AND CONDITIONS (cont'd)

16. CLEC Profile

Prior to ordering end user specific elements as provided in this tariff, telecommunications carrier must establish a CLEC Profile in the Broadband Ordering Profile ("BOP") graphical user interface. This interface will provide telecommunications carriers the capability to establish values associated with their end user's specific elements in the Network Management System ("NMS") controlling both the OCD and the NGDLC in the RT site. Telecommunications carriers will establish a profile that consists of combinations of upstream and downstream minimum and maximum bandwidth settings. Telecommunications carriers will be allowed via the BOP interface to establish a profile driven by telecommunications carrier AECN that consists of different combinations of these factors.

Telecommunications carrier is restricted to valid combinations that are technically feasible within the NGDLC equipment deployed by the Company. Such values are outlined in the Company "Broadband UNE Technical Publication".

The Company will not guarantee any amount of upstream or downstream minimum or maximum bandwidth as established by telecommunications carrier in a specific service profile. Telecommunications carriers will be provided whatever amount of bandwidth is generally available and the individual end user line synchronization over this architecture consistent with ADSL type service offerings.

An initial Profile must be built by telecommunications carrier five (5) business days prior to issuing any LSRs associated with end user specific elements as provided in this Tariff. The CLEC Profile of services as established via the BOP interface will encompass the Company's entire region.

SECTION 1 - Broadband Service

Original Sheet No. 36

1. BROADBAND UNE (cont'd)

(N)

C. TERMS AND CONDITIONS (cont'd)

16. CLEC Profile (cont'd)

Telecommunications carrier will have the ability to make changes to the CLEC Profile. The changed CLEC Profile will be available to telecommunications carrier when telecommunications carrier orders new end user specific elements. However, previously established end user specific elements will not be automatically changed by the change of CLEC Profile. Instead, should the telecommunications carrier desire to change the CLEC Profile for existing end user specific elements, telecommunications carrier must submit a "change" order for the existing xDSL service establishing the end user specific elements under the new Profile parameters. The standard charges for processing service orders shall apply for all change orders. The Company will not offer a telecommunications carrier-to-telecommunications carrier conversion of service profiles or non-intrusive change of service profile or non-intrusive change of service profile values on a line-by-line basis.

The Company has developed the BOP-GUI interface to encompass parameter values consistent across all vintages of NGDLC being deployed in conjunction with the Broadband Infrastructure (e.g. "Project Pronto").

§15.11 The Company reserves the right to restrict the number of service profiles that the telecommunications carrier is provided in conjunction with this offering due to technical considerations involving the vintage of NGDLC deployed in the Company network. At this time, it is recommended, but not required, that the telecommunications carrier not establish more than ten (10) individual service profiles due to such concerns.

§15.12 Additional instructions in relation to BOP system can be found in the "Broadband Ordering Profile User's Guide" available in the CLEC Handbook. Y

17. Operations Support Systems

The Company shall make available to telecommunications carriers unfiltered gateway access to its OSS databases that contain loop qualification information that is available to the Company, the Company's affiliates or any of its employees. This information shall be provided in whatever form or format that information is made available to the Company, its affiliates or any of its employees.

The Company shall make available to all telecommunications carriers the results of the audit of all OSS databases as ordered in Dockets 00-0312, 00-0313 and 00-0393, in order to determine all OSS data useful in pre-ordering, ordering, provisioning, maintenance and repair and billing for line shared xDSL. Such audit shall include in advance, all documentation needed to audit the systems and databases, including but not limited to user guides, data dictionaries, glossaries, job cards and table guides, with a description of each data field, all valid entries and an explanation of the data in that field.

The Company shall make available to telecommunication carriers all functionality for analyzing data in its databases listed in this Section. Such functionality shall include, but not be limited to, generating reports and inquiries.

18. MAINTENANCE /SERVICE ASSURANCE

The terms and conditions for maintenance and service assurance for the end-to-end UNE loop provisioned over the Project Pronto network architecture will be the same as the terms and conditions for maintenance and service assurance outlined in interconnection agreement or tariff as applicable as they relate to line sharing.

19. LOOP CONDITIONING

Loop conditioning may be necessary in such instance as the distribution copper portion of the loop from the RT site to the end user (including the copper feeder to the SAI) contains copper disturbers in the network. In such instance, loop conditioning will be required in conjunction with this offering. The Company will perform such conditioning when requested by telecommunications carrier. In such instance as Loop Conditioning is requested by telecommunications carrier for a loop provided for with this Broadband UNE, associated rates, terms and conditions for loop conditioning outlined in the Interconnection Agreement or the applicable tariff will apply.
